

WEP doesn't seem to work.

Make sure that your router has WEP enabled, and key type is set to Automatic. Either 64 or 128 bits is ok. Ensure that the only key 1 (if multiple keys are optional) is enable, and that it all characters in the key are hexadecimal values (ie 0 to 9 and/or A to F.) Some router models have been found to have difficulties, such as the NetGear WGT624 v3.
