

The InFusion™ used to be able to connect to a particular network, but now it won't.

Check Router Settings to ensure that nothing has changed with the network setup, such as MAC filtering has being enabled. If nothing has changed, trying restarting your router, by unplugging it from the power, and then reconnecting the power.

Still Unable to connect? It is possible something has changed in the InFusion® profile of that particular network. Go to 'WiFi setup' in InFusion® setup, and delete the network profile that is having the trouble. Once complete, restart the InFusion®, and scan for the network by Selecting 'New Connection'. You should then be able to connect.
